

From Eye to Insight

## Join Our THUNDER Accelerated Workshop!

RAW

THUNDER

Rabbit Tongue [transversal section of papilla foliata | Acridine Orange stain imaged 2 fluorescence channels DAPI (390nm ex) and FITC (474nm ex)]  
Image acquired by Luis Alvarez, Leica Microsystems

## BEGIN EVERY EXPERIMENT WITH CONFIDENCE

### THUNDER Live - Optimize your image in one simple step

Perform high resolution tissue imaging as well as live sample and model organism imaging on thick samples without struggling to find your region of interest. The new **THUNDER Live** add-on visualizes a computationally cleared image **instantly in the live viewer** and allows you to optimize ICC parameters by using live image feedback.

- > Intuitively and quickly find the best THUNDER ICC parameters on the fly while still in live view.
- > THUNDER Live's blur-free view also makes selecting significant regions of interest in your sample a breeze, even on thick specimens.
- > Scan slides up to 69% faster with Synapse and LMT250 F stage.
