DECODING GRADUATE ADMISSIONS IN STATISTICS, BIOSTATISTICS, AND DATA SCIENCES

Monday, October 24, 2022

2 p.m. ET (11 a.m. PT)

The goal for this ASA JEDI panel is to help decode the hidden curriculum (i.e., unwritten rules that influence success) of graduate admissions for statistics, biostatistics, and data science programs. We aim to make information about how to successfully apply to graduate school more readily accessible to a broader audience, including those who lack existing networks in academia.

Panelists:

Kagba Suaray, PhD, Graduate Advisor, Applied Statistics M.S. Program, CSU Long Beach

Maya Petersen, MD, PhD, Co-Director, Joint Ph.D. Program in Computational Precision Health, UC Berkeley-UCSF

Russell Shinohara, PhD, Chair, Graduate Group in Epidemiology and Biostatistics University of Pennsylvania
