

12 MONTHS OF RESEARCH SAFETY JANUARY 2024 DOOR PLACARDS

New Door Placards System

Effective immediately, the campus is moving to a new door placards system built into the **Risk and** Safety Solutions (RSS) Chemical Inventory application. It is replacing the old eContact system.

Labs are encouraged to use this system to print out new door placards if your door signs have not been updated within 1 year.

Advantages to using this new system:

- 1. It automatically pulls chemical information from your inventory to auto-populate fields and assign the correct hazard information.
- 2. It handles shared lab spaces better and computes the information for all lab inventories within the space.
- 3. It does not require an EH&S approval step, allowing labs to print out the placards as soon as the contact information is verified.

Accessing & Printing Out New Door Placards

Log into your Risk and Safety Solutions (RSS) Chemical Inventory homepage. Select "Inventory Summary". Scroll to the bottom to the "Door Hazard Signs" section. Select the room you would like to review and print. Make any edits to contact information as necessary. Save and print out the PDF. NOTE: Printouts MUST be in COLOR. Additional guidance is available here.

cy. The signs available for each room below include the chemical hazards GHS symbols. This comes from information in the chemical inventory for cals in each room. Inventory Managers can indicate additional hazards and emergency contact information on the door hazard sign.
