

# Mite-y Talks: International Webinar Series

The Acarological Society of America (ASA) is pleased to present to you our first international webinar series. We will feature highly experienced acarologists from all over the world who have largely contributed to the study of Acari through a long career of innovative research in multiple subfields of acarology. Join us in our monthly webinars to hear about their research, ask questions, and share your thoughts and comments.

This month, we will be hearing from Dr. Maria J. Navajas and Dr. Denise Navia from the French National Institute for Agriculture, Food, and Environment (INRAE) presenting:

Dr. Maria J. Navajas

Dr. Denise Navia

## ***Plant Mite Bioinvasions as a Long-Standing But Raising Challenge to Agriculture***

Crop protection confronts several defies often related to globalization. Bioinvasions or the introduction of new pests from one region or from one continent to another is one of the key challenges agriculture faces that might also be exacerbated by environmental modifications linked to climate change. In this talk, we will focus on invasive mites, mainly in Latin America and in Europe. Taking case studies as examples, we question the lessons taken from the past and foresee mite pest invasions.
