

ENTM 130: Invasion Ecology (Winter 2024)

Dr. Erin Rankin

In this course, we explore the introduction, establishment and impact of non-native, invasive species, with special emphasis on insects, plants, and pathogens.

You will delve into the mechanisms of invasion, learn research approaches for monitoring invasive species, learn how to conduct impact and risk assessments, and synthesize and critique scientific literature.

For more information, please contact Dr Rankin (erin.rankin@ucr.edu)
