Description: The purpose of this position is to assist researchers in experiments and daily operations in an applied entomology lab. Specific tasks may include:

- Watering plants, sowing seeds and transplanting seedlings
- Monitoring health and appearance of plants
- Maintaining insect colonies, and monitoring colonies for infestation by unwanted pests and pathogens
- Treating plants for pests and pathogens with biological controls (no insecticide use required)
- Washing laboratory supplies (e.g., pots, trays, bug dorms, meshes, plasticware, glassware)
- Assisting with researchers with a wide variety of experiments including set up, data collection, maintenance, and take-down

Requirements:

- Availability Spring 2025 through Spring 2026 and must be available to work during Summer break.
- The job requires occasional lifting of weights up to 30 lb. The student will report to researchers (graduate students, technical support staff, and the primary investigator).
- Applicants must be comfortable with occasional early work times (6-7am), physically demanding work outdoors, and working with insects.
- Must have a valid driver's license
