Title:
***"Conservation of native bees in Meso and North America:
from data analyses to conservation assessments"***

Abstract:

My work focuses on data analyses of native bees across regions, IUCN Red List assessments, and ecological niche modeling to evaluate the conservation status of native bees in Mesoamerica and as a postdoc in the Woodard Lab in North America. My background also has an interdisciplinary approach to understand local indigenous perspectives and its relationship with conservation and bees, which I will mention briefly.
