DFG Research Training Group *GönomiX*

Emerging genetic model systems: Cross-species comparison of developmental gene function and gene regulatory networks

GönomiX

PhD student positions
starting early summer 2026 in Göttingen
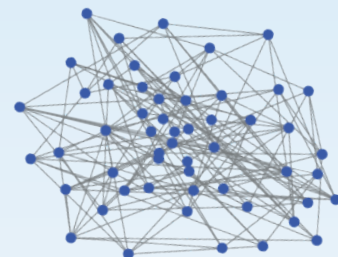

We are a team of scientists

studying the evolution of gene function, gene regulatory networks and chromatin in our zoo of emerging model organisms.

We are looking for students

holding or completing a MSc degree in life sciences, bioinformatics or related areas with strong interest in molecular genetics, genomics, imaging, bioinformatics and evolution.

We push the limits

of tools for studying gene function and develop new bioinformatics tools to analyse gene regulatory networks.

Application

We hire together with the *International Max Planck Research School Genome Science*.
Select *GönomiX* projects in the application portal - you may apply for both schools in parallel.
