UC SPEDDR Call for Abstracts

January 20-21, 2023

We are pleased to announce the 17th annual conference for UC SPEDDR. Established in 2005, UCSPEDDR is dedicated to research on special education, disabilities, and developmental risk needs in California schools. The center contributes to the statewide need to train teachers and researchers focused on special education. UC SPEDDR brings together faculty expertise across the University of California campuses to focus on the educational needs of children within the contexts of special education. Over the last decade, UC SPEDDR has grown to include presentations and discussions with faculty across UC campuses.

In addition, UCSPEDDR has focused on doctoral student training, providing a yearly conference for graduate students to present, network, and discuss research with colleagues across the state. The Doctoral Student Advisory Council (DSAC), a committee of doctoral students across the UC Campuses, organizes this yearly conference.

Call for Presentation Abstracts

Graduate students and postdoctoral scholars from related fields are cordially invited to submit research pertaining to special education, disabilities, and developmental risk. The oral presentations are a wonderful way to showcase new findings and to begin new discussions. The poster presentations make for the perfect opportunity to share your research with graduate colleagues and faculty from across the University of California. We are accepting submissions for panel presentations in order to allow for greater collaboration across presenters.

Presenters are invited to submit abstracts for both **empirical presentations** and **work-in-progress presentations**. While empirical presentations are great for data you may be presenting at other major conferences, work-in-progress presentations are great for graduate students and post-docs looking to get feedback about research proposals from a diverse range of UC faculty and student peers. Work-in-progress presentations do not require data and are open to all proposals at all stages of the research process.

Abstract deadline: November 23, 2022

Link to submission: <https://forms.gle/KU1q77skVj5Jm45E9>

The conference focuses specifically on professional development for graduate students within special education, disabilities, and developmental risk, and the two days incorporate faculty keynotes, oral presentations, poster sessions, and a UC faculty informational Q&A panel. Information regarding registration and accommodations will follow.

For any questions, please contact Elissa Monteiro (DSAC Conference Chair; emont062@ucr.edu), Aya Shhub (DSAC Council Chair; ashhu001@ucr.edu), or Giselle Salinas (DSAC Council Chair; gsali001@ucr.edu).
