

# Flagship Pioneering Fellowship

**A full-time summer Fellowship where exceptional innovator-entrepreneurs help create the next disruptive life science startups.**

The [Flagship Pioneering Fellowship](#) offers an unparalleled opportunity to apply your scientific expertise, entrepreneurial talent, and self-starter mentality toward creating the next world-changing startups and ventures in human health and sustainability.

Flagship Pioneering Fellows work in teams, asking “What if” or “If only.” Starting with a blank sheet of paper, Fellows leverage their scientific instincts and creativity to generate novel scientific concepts that go beyond the scientific literature and challenge dogma. Fellows then learn to iterate, challenge, and shape these ideas into unreasonable yet compelling venture hypotheses with the potential to produce pioneering new ventures.

We are seeking outstanding scientists, engineers, inventors and budding entrepreneurs who are eager to create first-in-category biotech companies from scratch. A summer as a Flagship Pioneering Fellow is an intense and exciting opportunity to work hand-in-hand with Flagship’s seasoned professionals through our uniquely entrepreneurial scientific exploration process and build breakthrough bioplatfrom companies that change the world.

- **12 week full time Fellowship June – August 2025**
- **Fellows receive a stipend and work at the Flagship Pioneering offices in Cambridge, MA**
- **Application open October 2024 – January 2025**

#### Qualifications:

- Deep scientific background in biology, chemistry, agriculture, engineering, AI/ML, computer science, materials science, or related scientific fields
- Completed or in the final year of a professional scientific degree (PhD, MD or international equivalent)
- Demonstrated leader, effective communicator, and strong team player
- Record of scientific and academic excellence and creativity in scientific problem solving
- Willingness to challenge dogma
- Self-starter mentality
- Available for full time employment in Cambridge/ Boston no later than May 2026

Bigger Leaps.

**We are a biotechnology company that invents platforms and builds companies that change the world.**

### **We are Pioneering**

Our process to create breakthrough companies begins with seemingly unreasonable “what-if” questions that catapult us far beyond the shores of current knowledge. We encourage our teams to dream big, leap boldly, and imagine alternative futures without the constraint of reason. We then navigate to transformational outcomes through rigorous science.

### **We are Entrepreneuring**

We have founded more than 100 first-in category bioplatfrom companies designed to generate multiple products that secure a healthier and more sustainable future. Our focus on bioplatfroms and patentable white spaces builds powerful, enduring value. And our unique model enables these bold ideas to be conceived, created, and capitalized in-house.

### **We are Flagship**

We are a brave and bold organization of creative-thinkers with insurgent mindsets and corporate-builders with incumbent expertise.

Our exceptional scientist-entrepreneurs and professionals are bonded by a culture and process that amplifies the diverse talents of each individual through teamwork and mentorship. Together, we are on a mission to harness the 21st century’s most powerful technological forces for good to deliver a better future for all.
